

WidePoint Enters Into Strategic Business Relationship With Protexx

Agreement expands product offerings and market reach for both companies

Wednesday, January 23, 2008

FAIRFAX, Va. -- WidePoint Corporation (AMEX: WYY), a leading provider of advanced information technology products and services including identity management and information assurance services, forensic informatics and wireless technology services, announced today that it has entered a strategic business relationship with Protexx, Inc., an information assurance company focused on securing data in motion over wireless environments with its patent-pending, encryption technology.

Protexx, headquartered in Deerfield Beach, Fla., develops and markets encryption software to provide for the safe transmission of sensitive data and to protect the identity of both sender and receiver. The company's 2048 bit encryption software is believed to be impenetrable by currently available hacker technology and is designed for use in a wide variety of sensitive fields, including health care, financial services, hospitality, mobile professionals and public sector service providers. The software can be integrated with a biometric positive identification component to assure complete security for transmission of data over the Internet.

WidePoint CEO Steve Komar said, "This relationship with Protexx will enable us to rapidly expand our core security offerings into the commercial sector and offer a broader portfolio of services to our wide base of current federal clients. Protexx software has numerous high-value applications across the public and private sectors. Under this agreement we will provide back-end support for high-end Protexx solutions as we significantly extend our reach into the commercial sector."

Peter Letizia, CEO and president of Protexx said, "We are excited about offering WidePoint's end-to-end identity management expertise to our customers as we bring our proprietary encryption technology to their growing client base. We are now positioned to extend a truly unique offering to the marketplace. Our service will be able to absolutely assure an individual's identity on our network while protecting their assets against fraud and identity theft."
