

WidePoint's "ORC" Subsidiary Announces Strategic Partnership Agreement with SETECS.

Tuesday, November 30, 2004

Washington, D.C. -- WidePoint Corporation's (OTC BB: WDPT) wholly-owned subsidiary Operational Research Consultants, Inc. ("ORC") today announced a strategic partnership agreement with SETECS, Inc., a noted specialist in end-to-end internet security software products.

This partnership agreement combines ORC's ACES and DoD ECA Certificate Authorities with SETECS OneMAN™ solution to create the first common "Smart Card Issuing Workstation" integrated with Federal Compliant Public Key Infrastructures ("PKIs"). The Workstation, which provides backward compatibility with existing CAC smart cards which protects the investment of over 4 million CAC smart cards already issued, utilizes existing Government approved PKI digital certificates, creates smart cards compatible with Microsoft Windows™ security protocols, supports multiple smart card manufacturers, is available on ORC's GSA Contracts.

Dan Turissini, ORC's Chief Executive Officer commented, "ORC is thrilled to add SETECS to its Common IA Enabling Infrastructure (CIEI)© offering. Together, we have an exceptional opportunity to take advantage of our leveraged technologies and Government relationships to exclusively deliver these best-in-class solutions, soon to be required for virtually all Federal agencies, government employees and in-house government contractors in response to Homeland Security Presidential Directive HSPD-12."

Sead Muftic, President and Chief Executive Officer of SETECS said, "This agreement represents an important step forward for both Companies' customers and shareholders. The combined offering may be installed locally or extended to a mobile smart card issuing workstation. It provides ORC and SETECS with a powerful competitive edge in the market. Not only are DOD CAC smart card owners beneficiaries, but other GSA and Contractor communities will also benefit from this GSC-compliant solution." Mark Fuller, Chief Executive Officer of WidePoint's Government Division, stated, "This partnership helps to accelerate the WidePoint business plan by joining two leading technology solutions providers and solidifying ORC's leadership role in the areas of Information Assurance and Security."

About Operational Research Consultants and WidePoint Corporation

ORC, a wholly-owned subsidiary of WidePoint Corporation, is a multidisciplinary firm, offering a broad range of technical, analytical and engineering services including weapons system acquisition management, software development, systems integration, e-commerce, and expertise in all elements of information assurance and security. ORC is the only commercially certified credential provider under the President's eAuthentication initiative and in addition to the DoD ECA program, ORC is also a prime contractor for the General Services Administration's (GSA) Access Certificates for Electronic Services (ACES).
