MANAGED MOBILITY SOLUTIONS

With more than 22 years in telecommunications management, cybersecurity, and information technology across commercial and government enterprises alike, WidePoint combines a breadth of experience and knowledge with in-depth understanding of our customers' needs to deliver Managed Mobility Solutions that address all aspects of mobility deployment, management, and support.

Not all Managed Mobility Solutions are alike.

Every day new offerings appear that promise organizations control over the increasing number and variety of mobile devices used by their workforce. The apps and data on the device, the person authorized to use it, the access granted— all are important considerations that make up only part of a comprehensive managed mobility program.

WidePoint's solutions start with your organization's policies and unique needs to allow us to craft the solution that best meets your requirements. When you choose WidePoint, you leverage more than 22 years of experience, time-tested systems and processes, and expert understanding that goes well beyond managing a device. We are building on lessons learned from deploying our solutions in mission-critical environments, with development maturity gained by supporting defense and homeland security sensitive data and enterprises.

## Empower Your Mobile Workforce

There's no single right answer to the challenge brought on by the proliferation of mobile devices in the workplace. Whether you provide devices and full service and support to your users or need to manage and protect work-related activity on personal devices, WidePoint can help ensure your users have what they need to be productive, while protecting your data and managing costs.

Optimize Your Resources

Leverage WidePoint's market-leading expertise in telecom management to help find the best plans, identify overbilling issues, and find the best and most efficient ways to deploy mobile solutions and support- and maximize workforce productivity—across the entire organization.
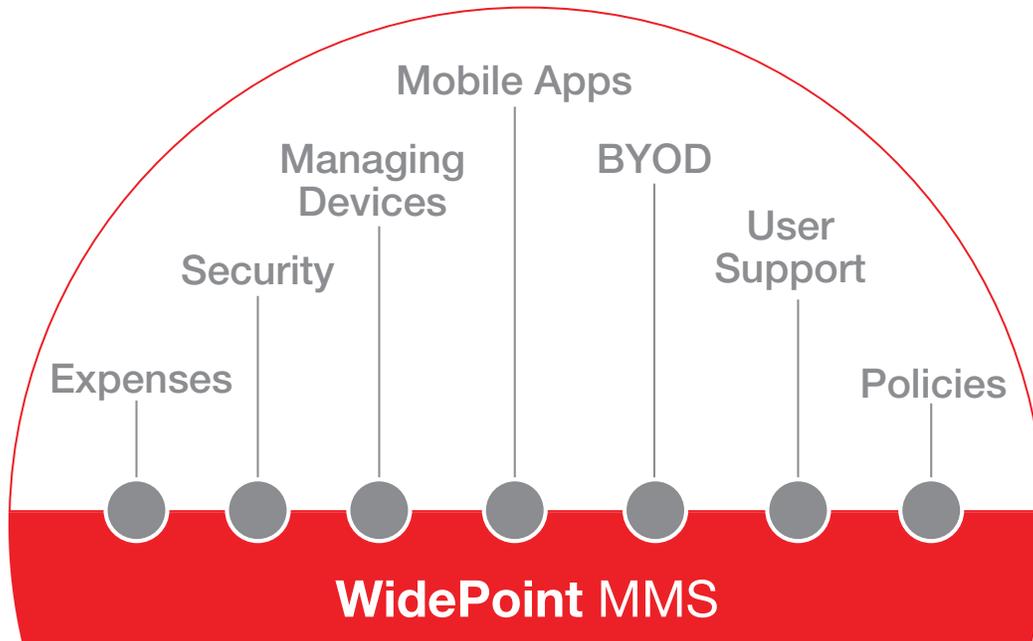

Manage and Control

Easily access detailed and real-time reporting on mobile usage including both voice and data, even when users are roaming, as well as manage orders, inventory, and support requests. WidePoint gives you a secure, central view of your organization's mobile devices and their usage.

MANAGED MOBILITY SOLUTIONS

Address all aspects of mobility deployment, management, and support

WidePoint MMS

EXPENSES – Ensure your users are on the most cost-effective plans, that carriers are compliant with your contract, and that invoices are accurate.

SECURITY – Create security policies and procedures that ensure the most cost-effective and secure remote access solutions; ensure secure disposal and the disabling of lost and stolen devices.

MANAGING DEVICES – Authenticated order management portal to place, track, and manage device and service requests; other services to ensure your users have the devices they need—set up and ready to go.

MANAGING APPS – Test, monitor, configure, and manage mobile applications – business or personal.

BYOD – Increase user productivity and provide efficiencies and cost savings. WidePoint's BYOD solutions mitigate risks related to vulnerabilities such as unauthorized access, protection of privacy information, integrity of data integrity, and more.

USER SUPPORT – WidePoint's state-of-the-art call centers, 24×7 emergency support, and expert technical support ensure calls are always answered and a resolution found—quickly.

POLICIES – WidePoint helps with defining, executing, and measuring effective wireless policies, which help establish best practices critical to creating a scalable, adaptable, and successful mobile program.
