

## PERMISSION-BASED AUDIT<sup>SM</sup>

A WidePoint Permission-based Audit (PBA) is a review of historic telecom-related expenses and current contracts.

Our experienced auditors look for past billing errors, find opportunities to optimize service plans, and negotiate new contracts, saving you money and recovering past overpayments.

### A Controllable Expense?

Telecommunications expenses are among the most controllable for an enterprise. But the complexity of carrier services and contracts can introduce errors that can be hard to spot. Wireless services are adding ever more complexity as service plans and data requirements continue to evolve and the mobile workforce grows.

### Outsource To The Experts

WidePoint has the expert staff and supporting technologies to perform audit, dispute management, and optimization across complex telecom invoices and contracts. We can

- Reduce ongoing telecom expenses by 10-50%
- Identify billing errors and recover funds
- Ensure contract compliance
- Optimize rate plan and feature utilization
- Identify unused assets
- Benchmark against market rates
- Develop and implement wireless policy

### WidePoint Works For You

WidePoint is completely carrier and vendor-neutral, so you can be sure we're 100% focused on your needs. We work with you every step of the way, presenting recommendations and proceeding with implementing only what you approve.

It costs you nothing to get started with a WidePoint Permission-based Audit. Our fees come either from the recovery of monies already paid to carriers on billing errors or from the reduction in future costs—for which you have already budgeted.

## PERMISSION-BASED AUDIT<sup>SM</sup>

### WidePoint Permission-based Audit

Our PBA services include complete and expert reviews designed to ensure you—not the carriers—are getting the most out of your telecom expenditures.

**Best Practices Review** – Evaluate processes and policies against industry best practices to ensure that the client has reasonable controls over services and asset inventory, operations and expenses.

**Contract Evaluation** – Wireless and wireline contracts are evaluated to ensure that they are in line with current market pricing.

**Wireless Policy Evaluation** – Evaluate and make recommendations to the existing wireless policy.

**Pay For Performance** – Clients are invoiced on actual savings after they are received. PBA's are self funding and clients can never be “out of pocket”.

**Permission-based** – All recommendations must be approved in writing before our project teams implement changes.

**Rate Plan Optimization** – Reduce ongoing expenses by eliminating unnecessary spending from over and under utilized wireless rate plans and correcting optional features.

**Invoice Validation** – Ensure contract compliance with carriers; a large percent of invoice errors result from carrier non-compliance with contract terms and conditions.

**Forensic Audit** – Recover money you may have already spent; audits can recover erroneous charges on past invoices.

**Dispute Recovery & Reconciliation** – Billing disputes are filed and tracked until funds are recovered.

**Asset Discovery** – Gain visibility and establish positive inventory control over corporate assets and services.

**Rationalize Services** – Right service, right quantity, right vendor, right cost.
